FARMI MASTERSPLIT WP 30 CS

**IS THE FIREWOOD PROCESSOR FOR
PRODUCING TOP-QUALITY FIREWOOD
WITH GREATER SAFETY, EFFICIENCY
AND EASE.**

Cross cutting is done lightly and quietly by a chainsaw function. Chainsaw is running only during cutting. Automatic lubrication of chain by pump. Splitting is done hydraulically into 2 or 4 parts. Splitting speed is increased by over 40% when using the rapid action function. Extra equipment includes blade splitting into to 6 pieces.

Debris and splinters fall down through the grating.

The hydraulic lifter (optional item) lifts the stems from the pile on to the feeding platform for processing. This way there's less strain on your back and your arms.

When in its transport position, the conveyor is locked over the machine.

FARMI Mastersplit WP 30CS's unique patented feeding platform makes the job easier and faster. You simply operate the cross-cutting lever and the stem moves along on the feeding platform.

The feeding platform is part of the standard equipment in all of the models.

V-shaped feeding platform keeps the tree stems in place during processing.

Manufacturer reserves right to changes in specifications.

MASWPENY / ER 11/2008

TECHNICAL INFORMATION	FARMI MASTERSPLIT WP 30 CS
CROSS CUTTING BY CHAINSAW	13"
DRIVE OF CHAINSAW	hydraulic
SPEED WHEN CROSS CUTTING TO 30 CM LENGTHS	35 splitting actions per minute
SPEED WHEN CROSS CUTTING WITH RAPID ACTION	50 splitting actions per minute
SPLITTING FORCE	3.5 / 5.5 tonnes
STEM DIAMETER	Max. 30 cm
LENGTH OF SPLIT WOOD	Max. 60 cm
CONVEYOR BELT WIDTH	24 cm
CONVEYOR LENGTH	4.0 m
DRIVE OF CONVEYOR	hydraulic
WEIGHT	450 kg
POWER REQUIREMENT	7.5 kW
POWER SOURCE	Tractor / Electric motor / Combustion motor
